Andrew's Expertise

Andrew is a plastic materials engineer with 20 years experience in plastic product development, including lifetime predictions and durability, materials selection and failure investigation.

Andrew has provided expert support for large international clients based in the UK and Worldwide.

Andrew has expertise in a range of areas including plastic product failure, material service performance and lifetime prediction, product design, manufacturing technologies and material selection. He also specializes in long-term plastic performance and durability in areas such as medical devices, automotive, offshore and engineering applications in demanding environments.

Andrew provides expert support services in a range of litigation areas including;

- Fault and failure diagnosis of many articles made from plastics including medical devices, engineering applications and pipe failures.
- Environmental stress cracking (ESC) of plastics.
- Material selection for new products, especially in demanding environments where long term durability is required.
- Expert Witness service are supported by Smithers' comprehensive chemical, materials and product test laboratories in the UK and US.
