Gary's Expertise – Rubber & Elastomeric Materials/Products

Gary has over thirty years' experience in working with rubber/elastomeric materials and products, in activities focused on expert witness, fault and failure diagnosis, R&D, product development, technical training and material processing.

As an expert witness Gary has presented technical evidence in court proceedings in significant legal cases, including in coroners, criminal and civil cases in the UK and beyond.

He provides expert witness support for large international clients in the UK and worldwide, as well as in relation to personal claims. In addition Gary has undertaken court witness familiarisation training for expert witnesses. He is also the author of a number of published technical papers, a regular conference speaker, and is the holder of three patents.

Gary provides expert witness services and support in a range of litigation scenarios, in relation to all articles made from rubber/elastomeric materials including:

- Breast and medical implants
- Medical devices
- Seals, gaskets, diaphragms etc.
- Tank linings, hoses, belts etc.
- Tyres and automotive components
- Aeronautical and marine components
- Hot water bottles and other consumer products.

Gary's expert witness services are supported by Smithers state-of-the-art chemical, materials and product testing laboratories in the UK and US, enabling him to provide comprehensive investigative and expert witness support.
