

AltoSling

Natural-Fit
Premium
in-situ sling

The Natural-Fit Premium Sling features our in-situ fabric. It is shaped to provide separate leg supports which allows a much easier application and encourages good hip positioning, whilst providing total body support throughout the lifting procedure. Our 3D Techmesh fabric has been developed with specific stretch properties and breathability which allows it to be safely left in-situ whilst minimising the risk of pressure points. The leg paddles are constructed with a parasilk internal surface to aid application under the users thighs.

Natural-Fit Premium slings feature corner pockets, allowing the lift tapes to be rolled and tucked away. This sling can also be used dry or wet – many customers use them in hydrotherapy or bathing.

This product is easy to apply from both the lying & sitting positions and is available in a range of sizes, from XX Small to XX Large. All labels are embroidered making them more resilient to the washing process.

The safe working load of this sling is 200kg for sizes XX Small to X Large, with the XXL size having an increased capacity of 300kg.

Order Codes S1100 (Loop fixing, no head support)
S1150 (Loop fixing, head support)

All available in sizes XXS to XXL. Custom sizes available.

Transfers Bathing In-Situ
